What is Process Capability? - NIST Process capability compares the output of an in-control process to the specification limits by using capability indices. The comparison is made by forming the ratio of the spread between the process specifications (the specification "width") to the spread of the process values, as measured by 6 process standard deviation units (the process ...

Origins of the NIST/SEMATECH e-Handbook of Statistical Methods in the ... Written by Mary Natrella of the NBS Statistical Engineering Laboratory and published in 1963, Handbook 91, was a best-selling NBS publication for many years. Engineers and scientists in a variety of fields appreciated it because of its problem-oriented approach to statistics and its detailed examples. In fact, Pat Spagon had been using it .... 6.4. The essential difference between modeling data via time series methods or using the process monitoring methods discussed earlier in this chapter is the following: Time series analysis accounts for the ...

7.2.6.3. Tolerance intervals for a normal distribution Tolerance intervals for measurements from a normal distribution. For the questions above, the corresponding tolerance intervals are defined by lower (L) and upper (U) tolerance limits which are computed from a series of measurements Y 1, …, Y N: Y L = Y ¯ ? k 2 s; Y U = Y ¯ + k 2 s. Y L = Y ¯ ? k 1 s. Y U = Y ¯ + k 1 s.. NIST / SEMATECH Engineering Statistics Handbook NIST / SEMATECH Engineering Statistics Handbook
