PowerShell Cookbook - Script a Web Application Session This recipe is just one of the hundreds of useful resources contained in the PowerShell Cookbook. If you own the book already, login here to get free, online, searchable access to the entire book's content.. PowerShell Cookbook - Create and Initialize Custom Objects When your script outputs information to the user, always prefer richly structured data over hand-formatted reports. By emitting custom objects, you give the end user as much control over your script's output as PowerShell gives you over the output of its own commands.

PowerShell Cookbook - Replace Text in a String PowerShell provides several options to help you replace text in a string with other text. Use the Replace() method on the string itself to perform simple replacements: PS > "Hello World".Replace("World", "PowerShell") Hello PowerShell. Use PowerShell's regular expression - replace operator to perform more advanced regular expression replacements:. PowerShell Cookbook - Convert a String to Uppercase or Lowercase For comparing some input against a hardcoded string in a case-insensitive manner, the better solution is to use PowerShell's -eq operator without changing any of the casing yourself. The - eq operator is case-insensitive and culture-neutral by default:

PowerShell Cookbook - Unblock a File You want to prevent Windows Explorer or PowerShell from warning that a file has been downloaded from the internet. Solution Use the Unblock-File cmdlet to clear the "Downloaded from the Internet" flag on a file:. PowerShell Cookbook - Writing Scripts, Reusing Functionality This recipe is just one of the hundreds of useful resources contained in the PowerShell Cookbook.
